

Energy Conservation

Energy conservation, such as efficient heating, cooling, and lighting, not only saves money, it also reduces environmental impacts. These include air pollution, acid rain and climate change, oil spills and water pollution, loss of wilderness areas, construction of new power plants, and foreign energy dependence. There are many things you can do to reduce your energy use without greatly changing your lifestyle. Energy conservation and efficiency go a long way preserving our planet’s rich natural resources and promoting a healthy environment.

Did You Know?

Governor Huntsman set a goal to increase energy efficiency by 20% by the year 2015. Learn more at: www.energy.utah.gov/

If every American household changed a single light bulb to an Energy Star bulb, it would provide enough power to light more than 2.5 million homes, while saving consumers money.

CHOICES:

- ✓ Purchase energy efficient products that have earned the Energy Star label www.energystar.gov/
- ✓ Subscribe to the PowerForward listserv and receive alerts when extra conservation is needed at: www.powerforward.utah.gov/
- ✓ Turn your refrigerator and water heater thermostats down.
- ✓ Replace incandescent light bulbs with compact fluorescent bulbs.
- ✓ Make your home more energy efficient: insulate your walls and ceilings, modernize your windows, wrap your water heater and plant shade trees.
- ✓ Run your dishwasher and washing machine only when fully loaded.
- ✓ Whenever possible, walk, bike, car pool, or use mass transit.
